Summary

The Academic Integrity Working Group (AIWG) was formed to investigate the suitability of Grammarly as a tool to support the academic integrity of student work at USQ. The Working Group comprised of members of the Education Support, Research Support and Student Learning and Development teams within Library Services.

The main focus was to evaluate the software's effectiveness in reducing accidental plagiarism, developing students' academic writing skills and enhancing students' competence in information literacy. This was achieved by conducting trials to compare the functionality of different versions of Grammarly and Turnitin software.

The findings indicate that Grammarly is not a useful tool for supporting academic integrity. The AIWG recommends that the use of the software should not be further pursued in this context. The software was further found to be limited in its potential as a teaching tool for academic writing.

Findings

Grammarly premium vs Grammarly free version trial

To further investigate the functionality of Grammarly, an analysis was undertaken by AIWG to compare the premium and free versions of this software. This was carried out through an examination of Grammarly's own comparison tables and a practical test of the two versions. As outlined in Table 1, there are notable differences between both versions.

| Free Version | Premium Version |
|---|---|
| 150 critical grammar and spelling checks | 250 critical grammar checks |
| This function not available in free version | A detailed report on the number and types or errors |
| This function not available in free version | Vocabulary enhancement suggestions |
| This function not available in free version | Genre-specific writing style checks |

Table 1. Overview of differences (Grammarly 2017)

| This function not | Plagiarism detector that |
|---------------------------|--------------------------|
| available in free version | checks more than 8 |
| | billion web pages |

The practical test, which involved uploading written work to Grammarly further highlighted some of the differences between the two products. The premium version identified 22 issues whereas the free version only identified 7 issues. Some examples of the types of grammar and spelling checks not identified by the free version included:

- Passive voice
- Overused words
- Sentence fragments and incomplete sentences
- Vocabulary enhancement
- Style check

Appendix 1 provides examples of the grammar checks not included in the free version and the differences in the level of detail and advice given between the two versions.

Overall, it was found that the premium version of the software provided more checks and detailed advice in more areas of writing but that the free version still provided a good base of checks that would be beneficial for students.

Despite the perceived benefits of utilising Grammarly, potential issues with both versions of the software were also identified. These included,

- Student can accept changes without engaging with or viewing the grammar explanation
- While some explanations are very detailed, would a student from a NESB or an average English speaker understand this explanation?
- Some issues are either not identified or are identified incorrectly. For example, the software does not seem to pick up repeated words or sentences that contain the correct and incorrect version of words, or when when a question mark was required

As an intention was the utilisation of Grammarly to develop academic writing skills amongst students, these issues need to be taken into consideration.

Grammarly vs Turnitin trial

USQ currently subscribes to Turnitin, a software package that assists in assessment management and plagiarism detection. Turnitin is a university-wide, ICT-supported software package capable of analysing submitted work against a large database of accessible sources, including assessment from other institutions. Turnitin works within Moodle Studydesk via an integrated plugin and has the

provision for greater teaching tools above the standard plagiarism checker, such as marking comments and assignment feedback.

As an integrated plagiarism detection tool already exists – and significant resources have been utilised to implement Turnitin across USQ – it is doubtful that a secondary tool will gain support unless proven more effective in plagiarism detection than Turnitin, or by offering alternative teaching benefits within the academic integrity or writing spaces.

AIWG conducted a short trial to compare Turnitin and Grammarly's effectiveness as plagiarism checkers, as well Grammarly's overall ability to help students improve their academic writing. This involved running a series of past students' assignments through both systems to compare feedback and assess viability.

Trials (see Appendix 2) concluded that Turnitin far exceeded Grammarly in its ability to locate material lifted from external sources and effectively communicate this to students. Turnitin's larger search database and layout make it a useful tool to assist students to check work, learning which sections require proper attribution while limiting loose paraphrasing. Grammarly failed to highlight the most basic examples of plagiarism and was unsatisfactory in this purpose due to a small pool of searchable sources. It could not replace Turnitin for plagiarism checking or help students understand referencing standards.

In terms of improving academic writing, USQ Turnitin does not provide separate writing support, so direct comparison was impossible. Instead, Grammarly's writing advice was considered as a complementary tool to improve overall writing quality and was assessed on these merits. While Grammarly's algorithms gave writing advice of some benefit, the program remained limited in the quality of this advice and focused on superficial issues rather than addressing structural issues within student writing. Some advice was contradictory and program limitations tended to promote Grammarly as a simple 'grammar checker' rather than a teaching tool.

Recommendations

Usability and Applicability

In terms of Grammarly's usability as a tool to assist with academic writing, results from the trials suggest possible advantages to incorporating this software. However, as an intention is for students at USQ to be self-directed learners and use the software proactively to improve their academic writing skills, the identified limitations within Grammarly would not be of assistance. For example, students may choose to not engage with feedback or understand explanations and instead use the software reactively to just correct their writing. Furthermore, in terms of grammar and writing, the support is moderate at best and only useful for those wishing to check their work for small errors in more detail than Microsoft word can provide. The rules are helpful but its use as a teaching tool is limited by its capabilities as mentioned above

For plagiarism detection and training, Turnitin is far superior to Grammarly as it provides morecomprehensive similarity matching results. AIGW does not recommend moving forward in this space as it does little to highlight or even inform the student of incorrect referencing or lifted work.

Future direction

Based on the evidence presented in this report, Grammarly has proved to be unsuitable for the intended purposes at USQ and should not be considered any further within this context.

It is the recommendation of AIWG that alternative solutions be investigated to address the issue of academic integrity, development of students' academic writing skills, and enhancing students' competence in information literacy. The following are suggested alternatives for consideration:

- Development of a compulsory module for first year students covering academic integrity
- Investigation of alternative software or online resources
- Strategic and proactive use of Turnitin as a tool to improve academic writing rather than as a plagiarism checker

Appendix 2

Turnitin vs Grammarly tests – full report

The following informal trial was conducted to assess Grammarly against Turnitin in terms of their plagiarism checker features. While testing, notes on the quality of Grammarly's writing advice were also taken (Turnitin has a writing tool but USQ has not purchased it for comparison).

Student test subjects

A sample of past students with various writing and plagiarism issues were chosen. All were from the Arts and Humanities portfolio and from various courses where high-quality essay writing/referencing is a necessary skill. This sample comprised of:

- Poor writing and deliberate student collusion that resulted in formal academic misconduct (third year) x2;
- Medium quality writing yet unintentionally severe plagiarism (first year) x2
- Domestic ESB student struggling with writing and grammar (first year)
- International student (NESB) struggling with writing and Grammar that severely impeded ideas (masters)
- High quality writing from domestic students (first year and third year) x2

Method

Assignments were run through Grammarly's online account and a Turnitin Pseudoclass. Results were compared by analysing each report's plagiarism levels (disregarding properly-reference material and bibliographies). Each Grammarly report was also briefly analysed for type and quality of writing feedback given to the student. The following results were recorded about each test group:

Plagiarism checkers

Group 1 (Collusion). In the case of collusion, Grammarly will not pick up the work of other students (it does not seem to have a database of submitted work, just scans webpages). Turnitin should do this, if the settings are right for submitted work to be added to their databases. Grammarly also did not pick up poorly referenced text from websites (eg only 4% plagiarism score in Grammarly, 13% in Turnitin, not counting the collusion or bibliography/properly quoted sections).

Group 2 (Unintentional plagiarism). With unintentional plagiarism (lifting of large sections of text directly from websites), Grammarly failed to identify any sections

in both student's work. When it did locate web sources, Grammarly highlighted only small sections of the larger text or were for irrelevant webpages that happened to use similar phrasing. Turnitin, however, gave full reports of which webpages the material came from, including other student work, websites, books.

For student A, this resulted in only 4% plagiarism being reported in Grammarly, but 39% in Turnitin, (not counting the collusion or bibliography/properly quoted sections). For student B, Grammarly improved, with 9% plagiarism compared to 21% in Turnitin. This improvement was due to Grammarly picking up the one website where most information was lifted.

Group 3 (Domestic student, writing issues). This domestic student had referenced correctly and both Grammarly and Turnitin came up with very little need for improvement (4% Turnitin, only 8 words with Grammarly).

Group 4 (International NESB Student, writing issues). Grammarly picked up no plagiarism in the student's work, and most work was properly referenced despite being picked up by Turnitin. There was some loose paraphrasing or non-cited sections that Turnitin acknowledged.

Group 5 (High Quality Student work). The first year student had referenced correctly throughout so Turnitin and Grammarly both reports 0% after quotes and bibliography were removed. The Third year student received 0% for Grammarly but Turnitin highlighted some insubstantial loose paraphrasing.

Plagiarism checker findings

In essence, Turnitin picks up too much source material and Grammarly picks up way too little. The preferable option would be to filter out the properly referenced material from Turnitin rather than not even be aware of it . The difference was striking and the results of this trial demonstrate that Grammarly should not be used for plagiarism checks.

Grammarly for writing

Group 1 (Collusion). The quality of writing in these collusion cases was rough and had a lot of niggling issues in formatting and basic word choice, and Grammarly did well to pick them up. There were 68 critical issues and 54 advanced issues in one case, for example, but most were small issues with full stops, capitalisation and long sentences. It would be helpful advice to quickly accept such changes, but the overall quality of the work would not be overly improved and not much would be learnt.

Group 2 (Unintentional plagiarism). Student A's work was already ok in writing due to so much lifting of material. Grammarly mainly picked up s/z issues, wordliness, unusual words choice and passive voice. Would only assist the student in fine-tuning the essay. Student B had many more errors in writing that Grammar assisted with, including dangling modifiers and incorrectly-placed prepositions.

Group 3 (Domestic student, writing issues). For the domestic student with low writing skills/confidence, Grammarly also gave a lot of feedback, largely on passive voice, repetition, unclear antecedents and use of 'has/had'. Once again the student could make use of this feedback to iron out small issues, but there was no concrete advice for larger issues of sentence structure.

Group 4 (International NESB Student, writing issues). I thought that the most benefit in using Grammarly would be for the NESB student, and to an extent this was correct. The work was riddled with issues (to the point of being incomprehensible), and Grammarly gave a lot of advice in fixing the essay. However, advice was limited to adding missing articles (the, an) giving advice on repetitive words, hyphenated words, capitalisation etc. It did not address any structural issues above passive voice, which this student actually needed (eg sentence structure, logic). It would be useful perhaps for those NESB students who just need to polish and check such small issues, rather than teach them how to write, but not so different from MS word.

The explanations for the rules sets it apart from MS Word checks (which assume the student knows what is wrong, but for a NESB student, they could be hard to understand without guidance.

Group 5 (High Quality Student work). Surprisingly Grammarly did pick up quite a few small issues with the work of top students. These were all the usual comments about overused words and passive voice, but sometimes also suggesting replacement words that were obviously incorrect (e.g. replacing 'suburban women' with 'rural women' as a synonym).

Writing findings

Overall Grammarly could be a beneficial tool for those wanting to quickly fix a range of small errors and polish their essays. It was quite simplistic in the type of errors uncovered, and while better than MS word, did not really seem to improve the student's work rather than superficial changes. Grammarly is therefore only useful as a small-scale Grammar checker. It will not cover larger issues in student writing that often are linked to poor grammar, such as poor sentence/paragraph structure or planning of ideas.

Other considerations

- The add-on to MS word forces the student to disable the 'undo' function on their essay. This means that most students who wish to use undo would only enable Grammarly at the end, as a check rather than a 'learn-as-you-write' tool. This may mean that students do not learn, but instead fall back on it as a check and simply accept the changes without learning the rules.
- The suggestions do seem to be sometimes incorrect and misleading, and could hinder assignments unless the student does adequately go through the suggestions and accept/reject (as they should anyway).
- The online and word versions do not seem to allow staff to upload a document then download a checked version (e.g. if we wanted a small group of staff to have access to run work through rather than purchase full accounts). Students must work through the changes in their Grammarly account before downloading an amended version instead.
