Doctor of Philosophy

2019

Abstract

Purpose – This research investigated the *overall* research question as follows: *How do factors (individual-level, organisational-level, industry-level, and country-level) influence occupational fraud in the INGO sector in Vietnam?* This thesis addresses occupational fraud or internal fraud, rather than external fraud, because the former accounted for the majority of losses due to fraud. Additionally, this thesis has two foci: *what may contribute to fraud* – the second focus, and *what may prevent fraud* – the first focus. Specifically, the first focus is on how effective *organisational-level* factors are at preventing or reducing fraud (*undetected, suspected, actual/detected, and future*). Whilst, the second focus is on factors (*individual-level, organisational-level, industry-level, and country-level*) that may contribute to fraud (*future only*).

Design/methodology/approach – This study develops a conceptual model, built on the fraud triangle by Cressey in 1950. The model combines: fraud (undetected, suspected, actual/detected, and future); individual-level determinants (e.g. pressures); organisational-level determinants [e.g. organisational ethical culture (OEC), organisational ethics program (OEP), and organisational internal control (OIC)]; the industry-level determinant (e.g. the non-profit nature); and country-level determinants (e.g. cultural, political, legal, economic, and technological). The methodological choice of research design is quantitative, using the survey strategy with a self-administered questionnaire to collect data. The questionnaires were administered to the entire target population of 408 INGOs (a census) in Vietnam. In each INGO, *only one* potential survey respondent was approached. Potential respondents were high-level staff members such as Chief Executive Officers (CEOs), Chief Financial Officers (CFOs), Chief Accountants (CAs), accounting/auditing/financial employees, and other managers (e.g. human resources managers). In order to approach potential respondents, the current research used two survey modes: the paper-based (drop-off) mode (administered through Indochina, a research company) and the web-based (online) mode (administered through the Internet). Furthermore, descriptive and inferential data analysis was performed. In inferential analysis, testing the goodness of the data, including the scales used, was undertaken, prior to hypotheses testing. Chi-square test for independence, independent-samples t-test, exploratory factor analysis (EFA), confirmatory factor analysis (CFA), multivariate analysis of variance

(MANOVA), logistic regression, and multiple regression were statistical techniques employed in inferential analysis. CFA was executed by AMOS, whilst the rest were performed by SPSS.

Results – This thesis attained 177 usable returned questionnaires, representing the overall response rate to be 47.6%. The results of statistical analyses are as follows.

What may prevent fraud? – The first focus.

Actual fraud

At the model level, the combination of OEC, the effectiveness of OEP, and the effectiveness of OIC, to some extent, significantly predicted actual fraud. Likewise, the combination of the degree of OEP and the degree of OIC, to some extent, significantly predicted actual fraud. Moreover, at the independent variable level, the dimension of *supportability* under OEC as well as both the degree and effectiveness of OIC make unique statistically significant contributions to predicting/explaining actual fraud. Specifically, the latter is related to the effectiveness of the three dimensions under OIC. They are: management-performed monitoring activities and process-level control activities; commitment-to-competence control environment; and audits-performed monitoring activities and gifts-hospitality control activities. In which, *commitment-to-competence control environment* made the strongest unique contribution to predicting actual fraud. Conversely, the degree and effectiveness of OEP play no role in mitigating actual fraud.

Undetected fraud

At the model level, the combination of OEC, the effectiveness of OEP, and the effectiveness of OIC, to some extent, significantly predicted undetected fraud, whilst the combination of the degree of OEP, and the degree of OIC did not. In addition, at the independent variable level, only the dimension of *supportability* under OEC made a unique statistically significant contribution to predicting undetected fraud, but not the effectiveness and degree of OEP and OIC.

Suspected fraud

At the model level, the combination of OEC, the effectiveness of OEP, and the effectiveness of OIC, to some extent, significantly predicted suspected fraud, whilst the combination of the degree of OEP, and the degree of OIC did not. Additionally, at the independent variable level, there were three dimensions making unique statistically significant contributions to predicting suspected fraud. They were: the dimension of *discussability* under OEC, the effectiveness of the dimension of ethics-incorporated performance and employment under OEP, and the effectiveness of the dimension of monitoring activities and process-level control activities under OIC. In which, *ethics-incorporated performance and employment* made the strongest unique contribution to predicting suspected fraud. Conversely, the degree of OEP and OIC played no role in mitigating suspected fraud.

Future fraud

At the model level, the combination of OEC, the effectiveness of OEP, and the effectiveness of OIC, to some extent, significantly predicted future fraud, whilst the combination of the degree of OEP, and the degree of OIC did not. Moreover, at the independent variable level, only the dimension of *supportability* under OEC made a unique statistically significant contribution to predicting future fraud, but not the effectiveness and degree of OEP and OIC.

What may contribute to fraud (future only)? – The second focus.

For the purposes of this thesis, individual-level determinants (e.g. pressures), organisational-level determinants (e.g. poor OEC, poor OIC), and the industry-level determinant (e.g. the non-profit nature) are micro factors, whilst country-level determinants (e.g. cultural, political, legal, economic, technological) are macro factors. At the model level, the combination of the determinants, to some extent, significantly contributed to engendering future fraud. In addition, at the independent variable level, there were five factors making unique statistically significant contributions to engendering future fraud. They are: two individual-level factors: non-financial personal pressure (e.g. lack of personal discipline, greed) and financial corporate/employment pressure (e.g. management financial interest, low salary); one organisational-level factor: poor OIC; one industry-level factor: the non-profit nature

in the operation of INGOs; and one country-level factor: the legal factor in Vietnam. In which, *the non-profit nature* was the strongest source of future fraud, whilst poor OIC is considered to be a silent source of future fraud.

Originality/value – This thesis has made three distinct contributions to the literature. Firstly, it is the first comprehensive study worldwide to incorporate individual-level, organisational-level, industry-level, and country-level factors into predicting future fraud in the INGO/NPO (non-profit organisation) sector in a specific country (e.g. Vietnam), with statistically empirical evidence. Secondly, it is the first comprehensive study worldwide to examine different stages of fraud occurrence (undetected, suspected, actual/detected, and future), with statistically empirical evidence. Thirdly, it is the first comprehensive study in Vietnam as well as in developing countries to investigate fraud in the INGO/NPO sector (industry-level), with statistically empirical evidence. Besides, this thesis also provided other remarkable theoretical contributions.

Practical implications – The results of this thesis are useful for different stakeholders in the INGO sector in Vietnam. The results may also be beneficial to stakeholders in the INGO/NPO sectors in other developing countries, which have similar or close national context factors as in Vietnam. The groups of stakeholders include: (1) CEOs, CFOs, CAs and other directors/managers of INGOs; (2) donors of INGOs; (3) auditors related to INGOs; and (4) the Vietnamese government. Furthermore, fruitful areas of further research were identified, in which five research areas, being equivalent to five research projects, could use the data collected by this thesis.

Certification of Thesis

This Thesis is entirely the work of Khanh Nguyen, except where otherwise acknowledged. The work is original and has not previously been submitted for any other award, except where acknowledged.

Principal Supervisor: Professor Karen Trimmer

Associate Supervisor: Professor John Sands

Student and supervisors signatures of endorsement are held at the University.

Acknowledgements

Completing a PhD thesis is an enormous task, especially when coping with the challenging area of research – fraud, as in this thesis. Although this thesis reflects the work of one individual, the completion of this thesis could not have been made a reality without the support of people and organisations. Hence, I would like to acknowledge their support contributed in several ways, namely academic, technical, financial, administrative and personal.

Firstly, I would like to express my sincere gratitude to my academic supervisors, Professor Karen Trimmer and Professor John Sands, for stepping into the breach, in the very difficult phase of this endeavour. I am very grateful to them for their professionalism, enthusiasm, patience, support, and help whenever I needed, whilst still permitting me space to conduct the research in my own way. They read the initial drafts of the chapters and provided constructive critiques, comments, and suggestions that, in turn, helped to improve the structure, content quality, and academic writing of this thesis. I could not have imagined having better supervisors at the University of Southern Queensland (USQ) for my PhD. Furthermore, I would like to offer special thanks to Professor Ronel Erwee, who unexpectedly passed away in 2017, and Associate Professor Latif Al-Hakim for their helpful advice in the early phase of my candidature. That advice contributed to the direction of my research.

Secondly, technically, I am highly appreciative of assistance from all people who took part in the validation/pre-testing of the English and Vietnamese-translated versions of the questionnaire. They included: (1) content experts who were members of ACFE (Brisbane chapter) and CPA Australia; (2) academics at Australian and New Zealand universities such as Professors and Doctors in auditing/fraud, research methodology and statistics, bilingual lecturers, and a language advisor; (3) a professional translator; and (4) a sample of INGO employees in Vietnam. Their inputs were really useful. Moreover, I would like to especially thank anonymous respondents who voluntarily participated in this research by completing the questionnaires. In addition, my thanks also go to Professor Peter Murray, Head, USQ School of Management and Enterprise, for performing the internal review of this thesis.

Thirdly, I would like specially to acknowledge the Australian government for providing financial support, which enabled me to conduct this research. Furthermore, my great appreciation must go to Professor Patrick Danaher, Dean, USQ Graduate Research School, for facilitating and arranging my academic supervisors above. Additionally, many thanks are also due to the Vietnamese government's Ministry of Foreign Affairs for granting me the permission to conduct this research in Vietnam. Besides, my thanks go to the libraries of USQ and Queensland University of Technology for their great library services, including so many books and online research databases.

Family are the foundation of who you are. I would like to express my deepest gratitude to my father, Nguyen Minh Duc and my mother, Dang Thi Nhu Phuong. Their unreserved support has been instrumental in my career as well as my life as a whole.

To my wife, Nguyen Van Chi, I am extremely grateful for her tremendous support, patience, sympathy, care, meals, for sharing the up and down moments, during the very long and challenging course of this PhD journey. She has taken care of our two children, as they accompanied me during my studies, meaning her immense self-sacrifice. I truly value and cherish this. Moreover, many thanks also go to my wife's mother, Hoang Thi Phuong, for her contributions to looking after our two children. I was applying to study the PhD when our first child arrived, whilst the arrival of our second child indicated the time when I was approaching the most challenging phases of my PhD journey. Besides, the assistance of my younger sister, Nguyen Thi Khanh Linh, when our second child arrived, was substantial. Last but not least, I would like to thank my children, Nguyen Khanh An (Adam) and Nguyen Khanh Ngoc (Nancy) for sustaining my research inspiration until the completion of this thesis.

I sincerely thank you all very much.

Organisational ethics program (at present - A solution)	311
Organisational ethics program (in the past - B solution).....	312
6.2.4.2.3. Organisational internal control (the first focus).....	312
Organisational internal control (at present - A solution).....	312
Organisational internal control (in the past - B solution).....	313
6.2.4.2.4. Individual-level pressures, organisational-level, industry-level, and country-level variables (the second focus).....	314
6.2.5. Assessment of response bias regarding survey modes	314
6.3. Testing the goodness of the data	317
6.3.1. Justification for steps performed in EFA	318
6.3.1.1. The suitability of the sample size	318
6.3.1.2. Factor extraction: Principal components analysis	318
6.3.1.3. Factor rotation: Varimax.....	319
6.3.2. Justification for the only use of CFA reflective measurement model in SEM	319
6.3.3. Organisational ethical culture.....	323
6.3.3.1. EFA.....	323
6.3.3.2. CFA.....	329
6.3.4. Effectiveness of organisational ethics program.....	331
6.3.4.1. Effectiveness of organisational ethics program (at present - A solution)	331
6.3.4.1.1. EFA	331
6.3.4.1.2. CFA	334
6.3.4.2. Effectiveness of organisational ethics program (in the past - B solution)	336
6.3.4.2.1. EFA	336
6.3.4.2.2. CFA	337
6.3.5. Effectiveness of organisational internal control.....	339
6.3.5.1. Effectiveness of organisational internal control (at present - A solution)	339
6.3.5.1.1. EFA	339
6.3.5.1.2. CFA	344
6.3.5.2. Effectiveness of organisational internal control (in the past - B solution)	347
6.3.5.2.1. EFA	347
6.3.5.2.2. CFA	351
6.3.6. Examining the effect of organisational characteristics.....	354
6.3.6.1. Hypothesis-1-associated variables.....	355
6.3.6.2. Hypothesis-2-associated variables.....	357
6.3.6.3. Hypothesis-3-associated variables.....	359
6.3.6.4. Hypothesis-4-associated variables.....	360

6.3.6.5. Hypothesis-5-associated variables.....	362
6.3.7. Assessment of common method bias (CMB).....	363
6.3.8. Summary	364
6.4. Hypotheses testing.....	364
6.4.1. Justification for the basic statistical assumptions used in the hypotheses testing	364
6.4.2. The influence of OEC, OEP, and OIC on actual fraud (hypotheses: H1; H1.1 – H1.8).....	367
6.4.2.1. Hypotheses H1; 1.1; 1.2; and 1.4.....	368
6.4.2.2. Hypotheses H1.6; 1.3; and 1.5.....	372
6.4.2.3. Hypothesis 1.7	374
6.4.2.4. Hypothesis 1.8	375
6.4.3. The influence of OEC, OEP, and OIC on undetected fraud (hypotheses: H2; H2.1 – H2.8).....	377
6.4.3.1. Hypotheses H2; 2.1; 2.2; and 2.4.....	378
6.4.3.2. Hypotheses H2.6; 2.3; and 2.5.....	381
6.4.3.3. Hypothesis 2.7	382
6.4.3.4. Hypothesis 2.8	383
6.4.4. The influence of OEC, OEP, and OIC on suspected fraud (hypotheses: H3; H3.1 – H3.8).....	386
6.4.4.1. Hypotheses H3; 3.1; 3.2; and 3.4.....	386
6.4.4.2. Hypotheses H3.6; 3.3; and 3.5.....	389
6.4.4.3. Hypothesis 3.7	391
6.4.4.4. Hypothesis 3.8	395
6.4.5. The influence of OEC, OEP, and OIC on future fraud (hypotheses: H4; H4.1 – H4.8).....	396
6.4.5.1. Hypotheses H4; 4.1; 4.2; and 4.4.....	396
6.4.5.2. Hypotheses H4.6; 4.3; and 4.5.....	399
6.4.5.3. Hypothesis 4.7	400
6.4.5.4. Hypothesis 4.8	401
6.4.6. Factors contributing to future fraud (hypotheses: H5; H5.1 – H5.16)	402
6.4.6.1. Hypotheses H5; H5.1 – H5.14.....	403
6.4.6.2. Hypothesis 5.15	407
6.4.6.3. Hypothesis 5.16	408
6.4.7. Summary	411
6.5. Overall summary.....	415
Chapter 7: Discussion, conclusions, and implications.....	416
7.0. Introduction.....	416
7.1. Re-introduction of the overall research question and research questions.....	418
7.2. Defining degree of coverage in the literature and this research’s types of contributions.....	419

7.3. Conclusions about hypotheses and sub-hypotheses.....	420
7.3.1. The influence of OEC, OEP, and OIC on actual fraud (hypotheses: H1; H1.1 – H1.8).....	420
7.3.1.1. Hypotheses H1; 1.1; 1.2; and 1.4.....	420
7.3.1.2. Hypotheses H1.6; 1.3; and 1.5.....	425
7.3.1.3. Hypotheses 1.7 and 1.8.....	426
7.3.2. The influence of OEC, OEP, and OIC on undetected fraud (hypotheses: H2; H2.1 – H2.8).....	427
7.3.3. The influence of OEC, OEP, and OIC on suspected fraud (hypotheses: H3; H3.1 – H3.8).....	429
7.3.4. The influence of OEC, OEP, and OIC on future fraud (hypotheses: H4; H4.1 – H4.8).....	430
7.3.5. Factors contributing to future fraud (hypotheses: H5; H5.1 – H5.16).....	432
7.3.6. Summary.....	436
7.4. Conclusions about the overall research question.....	443
7.5. Implications for theory.....	443
7.5.1. Theory of the firm, and principal-agent theory.....	444
7.5.2. Motivation theory.....	444
7.5.3. Fraud theory.....	444
7.6. Implications for methodology.....	446
7.7. Implications for policy and practice.....	447
7.7.1. For CEOs, CFOs, CAs and other directors/managers of INGOs.....	448
7.7.1.1. Actual fraud.....	448
7.7.1.2. Undetected fraud.....	449
7.7.1.3. Suspected fraud.....	449
7.7.1.4. Future fraud.....	450
7.7.2. For donors of INGOs.....	451
7.7.3. For auditors related to INGOs.....	452
7.7.4. For the Vietnamese government.....	453
7.8. Delimitations, limitations and implications for future research.....	453
7.8.1. Delimitations and limitations.....	453
7.8.2. Implications for future research.....	454
7.8.2.1. Topics requiring new primary data collection.....	454
7.8.2.2. Topics using data collected by the present research.....	455
7.8.2.2.1. First research area: A more in-depth study of the present research.....	455
7.8.2.2.2. Second research area: Focusing on soft controls – with OEC as dependent variables.....	457
7.8.2.2.3. Third research area: Focusing on hard controls – fraud prevention items being as dependent variables.....	458

7.8.2.2.4. Fourth research area: Focusing on hard controls – fraud detection items being as dependent variables	459
7.8.2.2.5. Fifth research area: Focusing on hard controls – corporate governance items being as dependent variables.....	460
7.9. Overall summary.....	461

List of figures

Chapter 2

Figure 2.1: Outline of the sections and sub-sections for Chapter 2.....	15
Figure 2.2: Map of Vietnam.....	17
Figure 2.3: The political system of Vietnam.....	34
Figure 2.4: The non-profit organisations (NPOs) and non-governmental organisations (NGOs) relationship, as well as the focus of this current research.....	39
Figure 2.5: The total funding of INGOs by industry in Vietnam in the 2003-2013 period.....	44
Figure 2.6: Hierarchy of legal documents of Vietnam.....	47
Figure 2.7: The governmental agencies involving in the operational management of INGOs in Vietnam.....	49

Chapter 3

Figure 3.1: Outline of the sections and sub-sections for Chapter 3.....	57
Figure 3.2: Maslow's hierarchy of needs.....	63
Figure 3.3: Roles of hygiene and motivation factors in Herzberg's theory of motivation.....	65
Figure 3.4: Maslow's hierarchy of needs model versus Herzberg's motivation-hygiene model.....	66
Figure 3.5: Categories of occupational fraud.....	71
Figure 3.6: Occupational Frauds by Category – Frequency.....	75
Figure 3.7: Occupational Frauds by Category - Median Loss.....	75
Figure 3.8: Types of economic crime experienced.....	77
Figure 3.9: Basic Conceptual Model for Financially Motivated Crime.....	78
Figure 3.10: The Fraud Triangle.....	79
Figure 3.11: Factors contributing to internal economic crime committed by internal actors.....	83
Figure 3.12: The Triangle of Fraud Action.....	86
Figure 3.13: Relationship between transparency and accountability.....	111

Figure 3.14: Principal-agent relations of accountability.....113

Chapter 4

Figure 4.1: Outline of the sections and sub-sections for Chapter 4.....151

Figure 4.2: Deductive and Inductive reasoning in business research.....156

Figure 4.3: Conceptual model of this research.....164

Figure 4.4: Overall conceptual model and hypotheses of this research.....183

Chapter 5

Figure 5.1: Outline of the sections and sub-sections for Chapter 5.....186

Figure 5.2A: The order of the procedures and techniques in the process of designing, developing, and validating the questionnaire.....221

Figure 5.2B: Principles of questionnaire design.....222

Figure 5.3: Forms of validity and reliability considered in this study.....250

Figure 5.4: Types of systematic error (bias) considered in this research.....259

Chapter 6

Figure 6.1: Outline of the sections and sub-sections for Chapter 6.....273

Chapter 7

List of tables

Chapter 2

Table 2.1: The number and the annual assistance of INGOs operating in Vietnam.....	42
--	----

Chapter 3

Table 3.1: Types of fraud by victim.....	69
--	----

Table 3.2: Classifications of Pressure/Motive.....	81
--	----

Table 3.3: Key researches on fraud at the non-profit/non-governmental sector in the world and Vietnam.....	95
--	----

Table 3.4: Key researches on ethics program at the non-profit/non-governmental sector in the world.....	124
---	-----

Table 3.5: Key researches on internal controls at the non-profit/non-governmental sector in the world.....	134
--	-----

Table 3.6: Key researches on ethical culture at the non-profit/non-governmental sector in the world.....	145
--	-----

Chapter 4

Table 4.1: Qualitative versus quantitative research differences.....	152
--	-----

Table 4.2: The nature of positivism.....	154
--	-----

Table 4.3: Comparison between Deduction and Induction.....	156
--	-----

Table 4.4: Characteristics of different types of business research.....	158
---	-----

Table 4.5: Research questions and hypotheses for this study.....	180
--	-----

Chapter 5

Table 5.1: Anti-fraud internal control items.....	197
---	-----

Table 5.2: Survey instrument translation strategies.....	234
--	-----

Chapter 6

Table 6.1: Missing data rates by usable returned questionnaires/cases.....	277
--	-----

Table 6.2: Target population and response rate per survey mode.....	279
---	-----

Table 6.3: Individual characteristics (the information of respondents themselves)...	299
--	-----

Table 6.4: Organisational characteristics (the information of respondents' organisations).....	302
Table 6.5: A comparison of 177 usable returned responses/INGOs and the benchmark sample of 128 INGOs.....	306
Table 6.6: Actual/detected fraud.....	310
Table 6.7: Likelihood of undetected and future fraud; certainty of suspected fraud...	310
Table 6.8: Fit indices and acceptable thresholds.....	323
Table 6.9A: Organisational ethical culture factors (including tests on convergent validity, reliability for each factor and the scale's overall reliability).....	326
Table 6.9B: Discriminant validity.....	328
Table 6.10: Fit indices for CFA reflective measurement models for the factors under organisational ethical culture.....	330
Table 6.11: Organisational ethics program factors (including tests on convergent validity, reliability for each factor and the scale's overall reliability) (at present - A solution).....	333
Table 6.12: Discriminant validity (at present - A solution).....	334
Table 6.13: Fit indices for CFA reflective measurement models for the factors under organisational ethics program (at present - A solution).....	335
Table 6.14: Organisational ethics program factors (including tests on convergent validity, reliability for each factor and the scale's overall reliability) (in the past - B solution).....	336
Table 6.15: Discriminant validity (in the past - B solution).....	337
Table 6.16: Fit indices for CFA reflective measurement models for the factors under organisational ethics program (in the past - B solution).....	338
Table 6.17: Organisational internal control factors (including tests on convergent validity, reliability for each factor and the scale's overall reliability) (at present - A solution).....	342
Table 6.18: Discriminant validity (at present - A solution).....	344
Table 6.19: Fit indices for CFA reflective measurement models for the factors under organisational internal control (at present - A solution).....	346
Table 6.20: Organisational internal control factors (including tests on convergent validity, reliability for each factor and the scale's overall reliability) (in the past - B solution).....	349
Table 6.21: Discriminant validity (in the past - B solution).....	351

Table 6.22: Fit indices for CFA reflective measurement models for the factors under organisational internal control (in the past - B solution).....	353
Table 6.23: MANOVA to examine the effect of organisational characteristics on hypothesis-1-associated variables.....	357
Table 6.24: MANOVA to examine the effect of organisational characteristics on hypothesis-2-associated variables.....	358
Table 6.25: MANOVA to examine the effect of organisational characteristics on hypothesis-3-associated variables.....	360
Table 6.26: MANOVA to examine the effect of organisational characteristics on hypothesis-4-associated variables.....	361
Table 6.27: MANOVA to examine the effect of organisational characteristics on hypothesis-5-associated variables.....	363
Table 6.28: Standard (simultaneous) logistic regression evaluating the influence of OEC, the effectiveness of OEP, and the effectiveness of OIC on actual fraud.....	370
Table 6.29: Standard (simultaneous) logistic regression evaluating the influence of degree of OEP, and degree of OIC on actual fraud.....	373
Table 6.30: Sequential (hierarchical) logistic regression evaluating the influence of OEC, degree of OEP, and degree of OIC on actual fraud.....	376
Table 6.31: Standard (simultaneous) multiple regression evaluating the influence of OEC, the effectiveness of OEP, and the effectiveness of OIC on undetected fraud....	379
Table 6.32: Standard (simultaneous) multiple regression evaluating the influence of degree of OEP, and degree of OIC on undetected fraud.....	382
Table 6.33: Sequential (hierarchical) multiple regression evaluating the influence of OEC, degree of OEP, and degree of OIC on undetected fraud.....	384
Table 6.34: Standard (simultaneous) multiple regression evaluating the influence of OEC, the effectiveness of OEP, and the effectiveness of OIC on suspected fraud....	388
Table 6.35: Standard (simultaneous) multiple regression evaluating the influence of degree of OEP, and degree of OIC on suspected fraud.....	390
Table 6.36: Sequential (hierarchical) multiple regression evaluating the influence of OEC, the effectiveness of OEP, and the effectiveness of OIC on suspected fraud....	393
Table 6.37: Standard (simultaneous) multiple regression evaluating the influence of OEC, the effectiveness of OEP, and the effectiveness of OIC on future fraud.....	397
Table 6.38: Standard (simultaneous) multiple regression evaluating the influence of degree of OEP, and degree of OIC on future fraud.....	400

Table 6.39: Standard (simultaneous) multiple regression evaluating factors (individual-level, organisational-level, industry-level, and country-level) contributing to future fraud.....405

Table 6.40: Sequential (hierarchical) multiple regression evaluating factors (individual-level, organisational-level, industry-level, and country-level) contributing to future fraud.....409

Table 6.41: Summary of hypotheses testing results.....413

Chapter 7

Table 7.1: A comparison of this research’s contributions, with information covered in the extant literature.....437

List of appendices

Appendix 1: Variables under each hypothesis, their measurement, sources and data collection instruments.....	584
Appendix 2: Ethical considerations and clearance.....	592
Appendix 2.1: Granted ethical clearance.....	592
Appendix 2.2: Approved amendment to granted ethical clearance.....	594
Appendix 2.3: Accepted final ethics report.....	596
Appendix 3: Introduction letter from the Indochina Research company.....	597
Appendix 3.1: Introduction letter from the Indochina Research company (English).....	597
Appendix 3.2: Introduction letter from the Indochina Research company (Vietnamese).....	598
Appendix 4: Invitation letter from the researcher.....	599
Appendix 4.1: Invitation letter from the researcher (English) for paper-based survey.....	599
Appendix 4.2: Invitation letter from the researcher (Vietnamese) for paper-based survey.....	601
Appendix 4.3: Invitation letter from the researcher (English) for web-based survey.....	603
Appendix 4.4: Invitation letter from the researcher (Vietnamese) for web-based survey.....	605
Appendix 5: Participation information and informed consent.....	608
Appendix 5.1: Participation information and informed consent (English).....	608
Appendix 5.2: Participation information and informed consent (Vietnamese).....	611
Appendix 6: Survey questionnaire.....	614
Appendix 6.1: Survey questionnaire (English).....	614
Appendix 6.2: Survey questionnaire (Vietnamese).....	628
Appendix 7: Technology features applied in Survey Monkey.....	642
Appendix 8: A sample copy of the reminder email.....	647
Appendix 9: Summary of the validity and reliability of this research.....	649

Appendix 10: Codebook (first page).....	654
Appendix 11: The transfer sheet (first page).....	655
Appendix 12: Missing data by variable; Little’s MCAR test.....	656
Appendix 13: The website to log in the INGO directory of the VUFO-NGO Resource Centre.....	700
Appendix 14: Independent variables.....	701
Appendix 14.1: Organisational ethical culture (the first focus).....	701
Appendix 14.2: Organisational ethics program (at present) (the first focus).....	704
Appendix 14.3: Organisational ethics program (in the past) (the first focus).....	705
Appendix 14.4: Organisational internal control (at present) (the first focus).....	706
Appendix 14.5: Organisational internal control (in the past) (the first focus).....	709
Appendix 14.6: Individual-level pressure, organisational-level, industry-level, and country-level variables (the second focus).....	712
Appendix 15: Assessment of response bias regarding survey modes.....	714
Appendix 16: CFA reflective measurement models.....	749
Appendix 16.1: CFA reflective measurement models for the eight factors under organisational ethical culture.....	749
Appendix 16.2: CFA reflective measurement models for the three factors under organisational ethics program (at present - A solution).....	752
Appendix 16.3: CFA reflective measurement models for the three factors under organisational ethics program (in the past - B solution).....	753
Appendix 16.4: CFA reflective measurement models for the five factors under organisational internal control (at present - A solution).....	754
Appendix 16.5: CFA reflective measurement models for the five factors under organisational internal control (in the past - B solution).....	757
Appendix 17: Hypotheses testing printouts extracted from SPSS.....	760
Appendix 17.1: The influence of OEC, OEP, and OIC on actual fraud (hypotheses: H1; H1.1 – H1.8).....	760
Appendix 17.2: The influence of OEC, OEP, and OIC on undetected fraud (hypotheses: H2; H2.1 – H2.8).....	771
Appendix 17.3: The influence of OEC, OEP, and OIC on suspected fraud (hypotheses: H3; H3.1 – H3.8).....	780

Appendix 17.4: The influence of OEC, OEP, and OIC on future fraud (hypotheses: H4; H4.1 – H4.8).....	789
Appendix 17.5: Factors contributing to future fraud (hypotheses: H5; H5.1 – H5.16).....	798
Appendix 18: Acknowledgement letters.....	811
Appendix 18.1: Acknowledgement letter from book authors.....	811
Appendix 18.2: Acknowledgement letter from Cengage Learning.....	813
