

International Conference on Logistics and Supply Chain Management 2006

LSCM 2006

January 5-7, 2006 HONG KONG

Organized by
Department of Industrial and Manufacturing Systems Engineering
The University of Hong Kong

Conference Web Site

<http://www.imse.hku.hk/iclscm2006/>

Aims and Theme

The objective of the Conference is to provide a forum for the sharing of experience, best practices and innovative ideas among the academia, industry and government agencies from a global perspective. It is also expected that a synergy can be established between the academia and the industry which will pave the way for further collaborations.

Apart from sessions for renowned researchers and scholars to share open problems, new theories, trends, developments and applications in all areas of logistics and supply chain management, special sessions will be available for well-seasoned practitioners to exchange their business insights and industry know-how. Technical visits will also be organized to enrich the experience of participants of the Conference.

The main theme of this Conference is "logistics strategies and technologies for global business". The following issues will be covered:

1. Global logistics and supply chain operations in the uncertain business environment.
2. Research on operations strategies, network analysis and distribution channels for international logistics and supply chains.
3. Global and regional trade regulations, sourcing and inventory strategies in the global perspective.
4. Risk management in global logistics and international transportation.
5. Implications of CEPA on HK businesses on their market access to the Mainland, their competitive advantages in the Pearl River Delta region, and development of logistics and supply chain industries in China.
6. Applications of technologies in manufacturing logistics and supply chain management to enhance the performance and competitiveness of small-and-medium enterprises
