The 21st century is called “the age of water.” Securing safe and sufficient water supplies and creating suitable water environment have become urgent issues worldwide. The Asia-Pacific region, also, needs to maintain and develop its sound water supply and water recycling systems with the increasing population and the accelerating urbanization.

Under these circumstances, holding an international conference on the subject of water in Tokyo, a global megacity and one of the political and economic centers in the Asia-Pacific region, should prove very meaningful, as Japan works toward fulfilling a leading role in realizing sustainable water supply and recycling systems.

The 4th IWA-ASPIRE Conference & Exhibition will be a platform where the participants share information and issues through discussions and exchanges, and a chance for all water-related sectors including governments, academics, utilities and industries to cooperate and contribute to the development of water supply and recycling systems.
